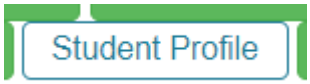
Student Screen 4

Overview

This guide details the enablement of detailed student data within the student dashboard. There is a dependency on data items being populated within the student data import before they are visible within the dashboard. If for example the tutor email field is not populated in the data import, although the column will be visible when enabled, no data will display for students listed.

Access Profile

The additional metrics are controlled by one access profile permission, Students = Student Profile. If you have different staff group profiles configured, this permission will require enabling across the groups in order for the options to be available for the groups within the student dashboard.



Data Items

Items that will display with the permission enabled are:

• Preferred Name • Student Year • College • Tutor Email • Study Level • Status • Date of Birth • Age • Gender • Personal Email • University Email • Contact Number

GDPR

Student data items that are additionally controlled by the GDPR permission are:

• Date of Birth • Age • Gender • Personal Email • University Email • Contact Number

Where the GDPR permission has been enabled (not green) the above items where populated will not be visible to the appropriate groups that have it applied.

Student Screen

On enabling the permission, the additional column options will be available for selection via the user configuration option within the dashboard.

If any custom views have been configured, these views may require updating to include the new metrics.
