Attendance

Here you will see the students overall attendance percentage for the current academic year. You will also see a summary of percentage attendance broken down by individual modules. By default, the below calculation is based on Mandatory teaching events only however this may be changed by SEAtS to include all. (Mandatory and Non Mandatory Teaching events) The calculation is worked out using the following: Attendance by Frequency - Total Number of ATTENDED Scheduled classes in current Academic Year DIVIDED BY Total Number Scheduled classes in current Academic Year * 100. This can be changed to calculate by duration on request.
